

## Rope Cascade System Installation Guide

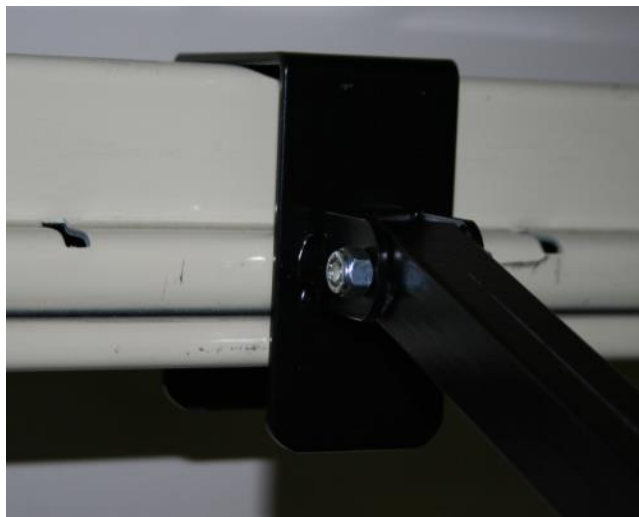

### Step 1

Adjust your beam to desired height and angle.

### Step 2

Have the clamp part of the rope system hang on beam.

Step 3

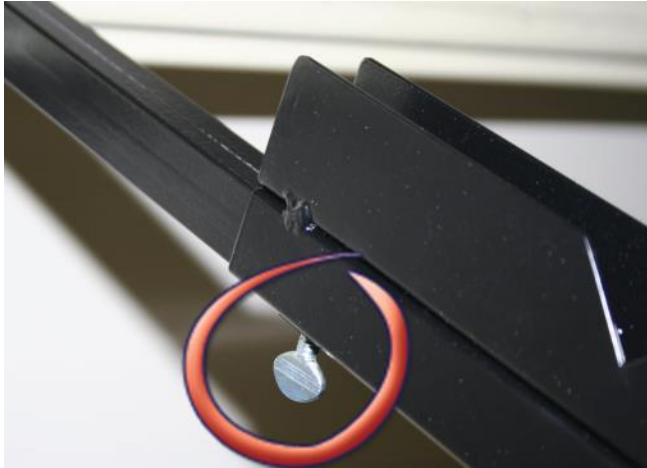

Hang front part of rope system on beam. You have two options, see pictures below. You can also secure the rope system using the pre-drilled hole. Screw not included.

Step 4

Secure the whole thing using the screw located under the rope system.

See below how it should look like

Step 5

Install other rope system bar following previous steps.

Step 6

Install 1 or 2 reels on tube (# 99061) and put on rope system using the system notch.

Step 7

Repeat all steps depending on your need. See final result below.

For 16 rolls you will need: 3 rope system (# 99104) and 4 tubes (# 99061). For 16 rolls, you will need: 5 rope system (# 99104) and 8 tubes (# 99061).

You can go up to 20 rolls, for that you will need 6 rope system (# 99104) and 10 tubes (# 99061).

## **There are many benefits to our new rope system**

1. Assembly is really fast and easy compare to old system
2. A more stable/stronger system
3. Installation is really quick
4. Products are highlighted / in-store look is improved
5. Replenishment is really quicker and easier than before
6. You can go up to 20 rolls per 8' bay.
